

PROFESSIONAL PROFILE

Management Engineer and technical product builder working across applied AI, software, data and interactive web. I translate operational problems into working digital systems: domain and data models, Python/FastAPI backends, LLM/retrieval components, automation pipelines and user-facing interfaces. Strongest in end-to-end solution ownership, AI-assisted engineering, system architecture and business-to-technology translation.

Target roles: Product Engineer · AI Solutions Engineer · Technical Consultant · Software / Data / AI roles · Digital Product

PROFESSIONAL EXPERIENCE

Project Manager – Digital Transformation & AI Systems

Jul 2026 – Present

Renewable-energy business - Italy

- Own product vision, system architecture, requirements and delivery for an internal knowledge and operations platform covering documents, operational data, workflows, search, reporting and AI-assisted features.
- Delivered the core data/software architecture: Microsoft Graph incremental sync, versioned document registry, PostgreSQL multi-schema model, FastAPI application and scheduled Azure jobs.
- Architected hybrid retrieval with PostgreSQL FTS + pgvector/HNSW and citation-level provenance; integrated Azure OpenAI embeddings and bounded LLM workflows with validation, cost controls and reversible actions.
- Modelled business entities and deterministic domain logic, migrated legacy data and converted spreadsheet-based calculation logic into tested Python services.
- Operated Docker/Azure deployments and established engineering governance with migrations, testing, strict typing, linting, ADRs and structured AI-assisted code review.
- Bridge business, operations and technology daily, deciding when to use deterministic software, data engineering or LLM-based assistance based on reliability, cost and traceability.

Operations Assistant – Data, IT & Process Automation

Apr 2025 – Jul 2026

Healthcare infrastructure company - Italy

- Worked cross-functionally across operations, engineering, procurement, IT and sales, turning workflow problems into data tools and automations.
- Developed Python and Excel/VBA solutions for production scheduling, logistics optimisation, data quality, reporting and repetitive process automation.
- Analysed operational data, supported planning/forecasting and contributed to process redesign and international project coordination.

SELECTED PROJECTS

Interactive Web / 3D Digital Products

2026

- Developed Next.js/React experiences with Three.js/WebGL, scroll-driven interactions, custom 3D assets, responsive mobile adaptations and Vercel deployment.

Industrial Optimisation & Automation

2025–2026

- Created tools for production scheduling, 2D nesting, packaging configuration and 3D container loading, combining algorithms, data models and operational interfaces.

TECHNICAL HIGHLIGHTS

- End-to-end ownership spans domain discovery, architecture, data modelling, backend/retrieval, interfaces, deployment and operational governance.
- Architected and delivered a multi-domain internal platform spanning operational data, document intelligence, AI retrieval and scheduled Azure workloads, backed by extensive automated testing and controlled schema evolution.
- Best fit is where business context and technical delivery meet: product engineering, AI solutions, technical consulting or multidisciplinary software roles.

CORE SKILLS

AI & Retrieval Azure OpenAI · LLM integration · embeddings · pgvector · hybrid search/RRF · grounded generation · MCP · human-in-the-loop patterns

Software Python · FastAPI · REST · SQLAlchemy · Alembic · PostgreSQL · pydantic · JavaScript/TSX

Data Data modelling · incremental ingestion · ETL/ELT-style pipelines · provenance · versioning · data quality · SQL · Excel/VBA · Power BI

Frontend / Product React · Next.js · Three.js/WebGL · responsive UI · Leaflet · interaction design · Vercel

Cloud / Integrations Microsoft Graph · SharePoint · Azure Container Apps · ACR · Azure Document Intelligence · Supabase/PostgreSQL · Docker

Delivery Requirements engineering · domain modelling · solution architecture · technical project ownership · Git/PR workflow · ADRs · testing/review gates

EDUCATION

BSc in Management Engineering (L-9) · LIUC – Università Carlo Cattaneo, Castellanza, Italy · Apr 2026

Thesis: Digitalization and process automation in a healthcare company

Erasmus+ – Universidad Loyola, Seville · 2024 · 11 months

Digital marketing · Market analysis · Business decision-making

LANGUAGES & ADDITIONAL EXPERIENCE

Italian – Native **English** – B2 **Spanish** – B2

Additional experience: University orientation & information support (2024) · Technical support in audiovisual productions (2023) · Freelance PR & commercial promotion (2017–2019)
